

How to Remove the eAMS Toolbar for a Specific Patient's Chart

In eligible asthma charts, the eAMS toolbar automatically inserts the tag “eAMS Patient” in the Personal History (“PERS”) field, or a “Σ” symbol in the Comments section of the patient demographics, shown in the following screenshots:

asthma
salbutamol sulfate twice daily
Flovent Diskus twice daily
No known allergies Aug 5, 2020

 Refresh **Patient eligible for asthma decision support.**
However, needs to complete questionnaire - [click here to open](#)

To prevent the toolbar from appearing in a specific patient's chart, open their chart and edit the “eAMS Patient” tag to “eAMS No” or add a negative sign before the Σ symbol (i.e. “-Σ”) in the Comments section of the patient demographics. Once the tag is edited, the toolbar will disappear upon chart refresh. Note that these patients will also no longer be identified by any of the searches or Ocean Reminders that may be used in your clinic to identify patients requiring email reminders to complete their questionnaire in advance of their appointment.
